# SERVER MIRROR

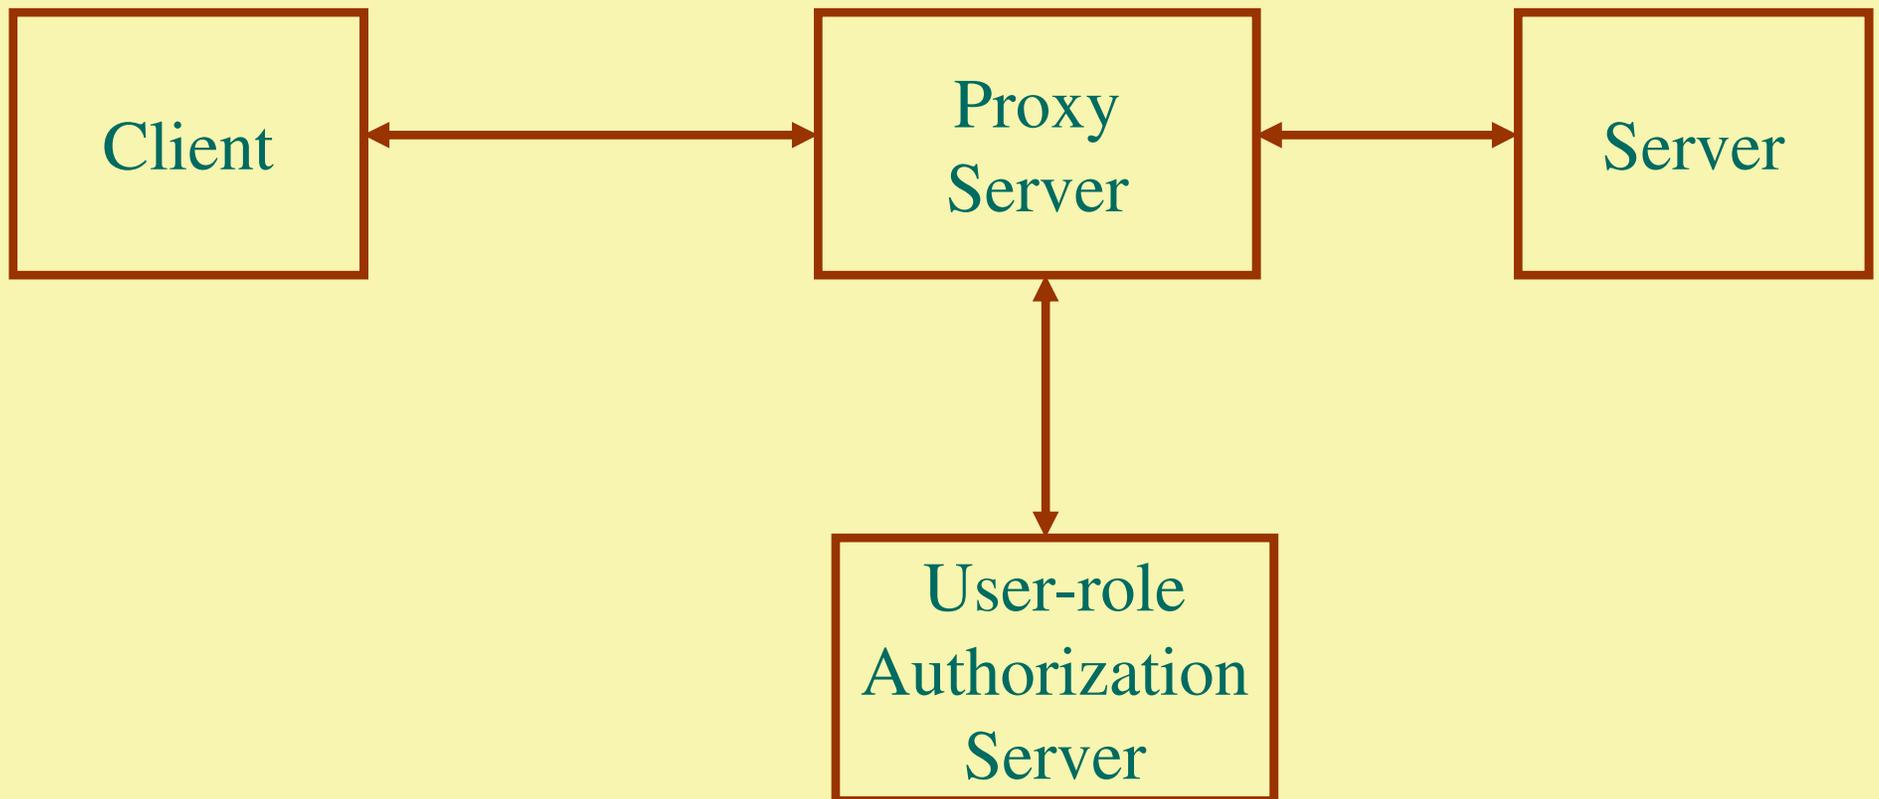

# SERVER-PULL

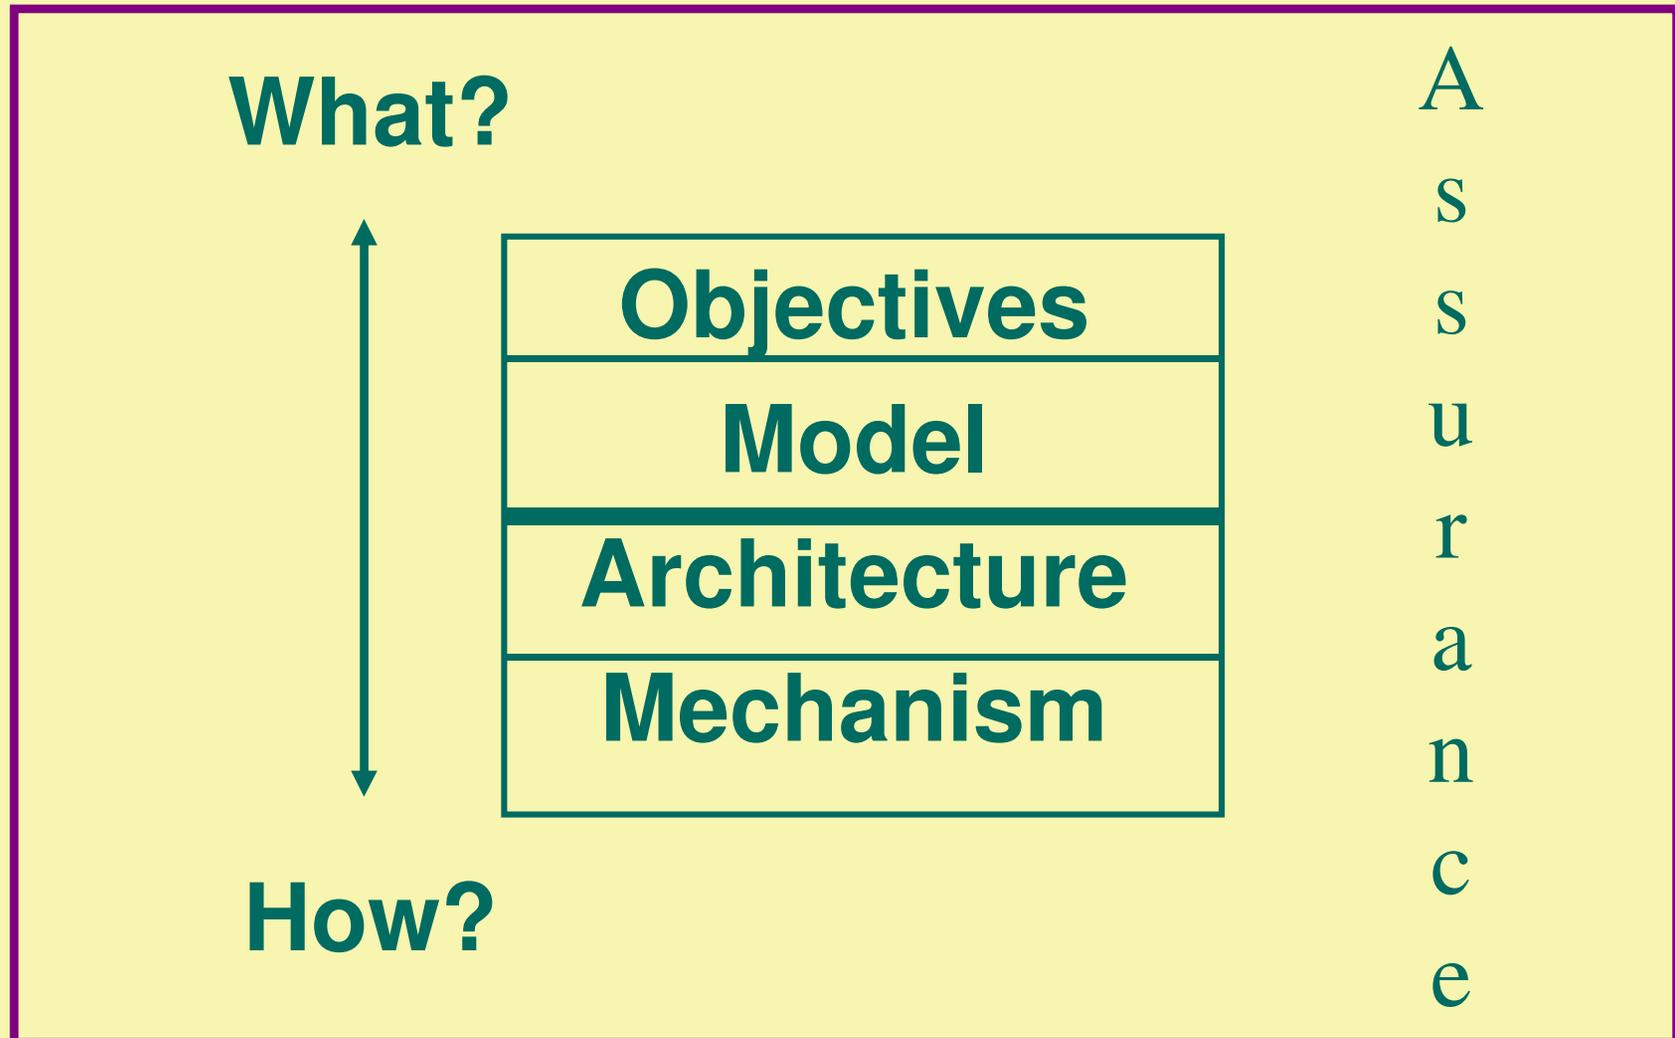

# USER-PULL

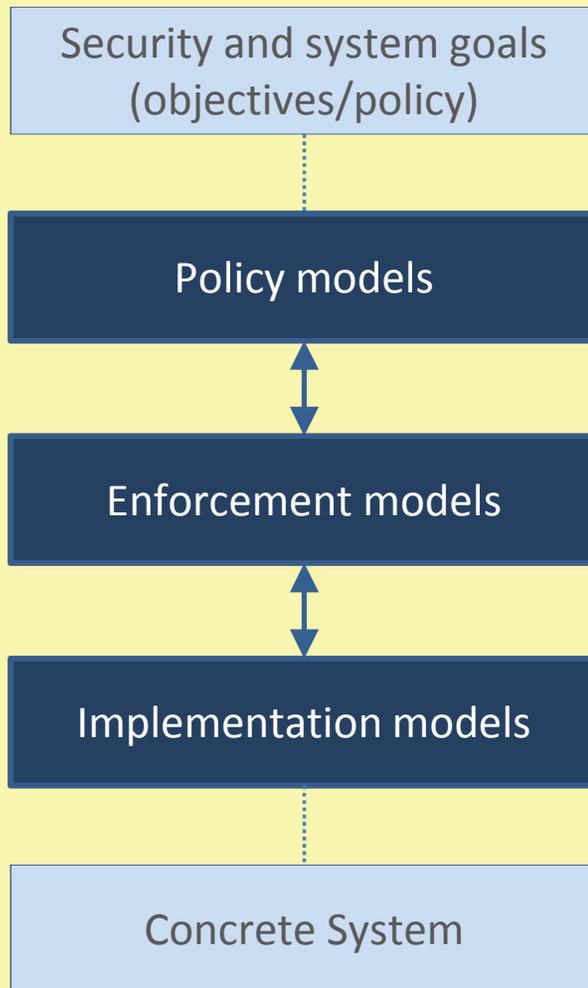

# PROXY-BASED

# THE OM-AM WAY

# PEI

- Necessarily informal
- Specified using users, subjects, objects, admins, labels, roles, groups, etc. in an ideal setting.
- Security analysis (objectives, properties, etc.).
- Approximated policy realized using system architecture with trusted servers, protocols, etc.
- Enforcement level security analysis (e.g. stale information due to network latency, protocol proofs, etc.).
- Technologies such as Cloud Computing, Trusted Computing, etc.
- Implementation level security analysis (e.g. vulnerability analysis, penetration testing, etc.)
- Software and Hardware
